

Experience

JAGUAR LAND ROVER

Warwick, United Kingdom

ADAS Diagnostics Product Owner/Test Engineer

04.2025-Present

- Led end-to-end software-level development and validation of critical ADAS features across multiple vehicle platforms, taking full accountability for release readiness and on-time delivery.
- Owned agile product delivery lifecycle, managing the feature backlog by defining Epics, User Stories, sprint planning, and KPIs; served as the central Point of Contact for all ECU testing during daily scrums and Big Room Planning (BRP).
- Conducted hands-on debugging, calibration, and data acquisition for advanced perception systems (Camera, Radar, Lidar, Ultrasonic), bridging the gap between tier-1 hardware suppliers (Bosch, Hella) and software platforms (Nvidia).
- Collaborated closely with cross-functional engineering teams and external squads to identify, track, and resolve complex ECU hardware/software integration errors.

ADAS VIL Test Engineer

02.2023-04.2025

- Led VIL test planning, execution, reporting for mainly Active Safety and Cruising features which includes; *Automatic Emergency Braking, Road Debris Warning & Assist, Lane Support System, Active Blind Spot Monitoring, Door Opening Warner, Cross-Traffic Assist, Drive Away Prevention, Speed Limit Information, Extended Traffic Sign Assist, Stop Sign and Red Light Assist, Pre-Crash, Interior Sensing, Driver Monitoring System, Active Cruise Control, Active Speed Limiter, Hands Free Extension, Driver Initiated Lane Change, Automatic High Beam Control, Predicted Speed Optimization, Emergency Lane Keep Assist, Attention Assist, Adaptive Interior Dimming, Traffic Light Assist.*
- Translated complex Euro NCAP and Functional Safety (FuSa / ISO 26262) standards into functional test scenarios and evaluation criteria, ensuring feature compliance and robust performance targets.
- Co-led testing and hardware/software integration for the prototype SAE Level 3 "LOKI" project in strategic collaboration with Nvidia, managing sensor data acquisition, analytics, and test rig development to advance next-generation autonomy roadmaps.

PORSCHE ENGINEERING

Prague, Czech Republic/ Stuttgart, Germany

ADAS System Engineer/Test Engineer

10.2021 – 11.2022

- Led HIL and VIL testing for Basic Perception and Traffic Sign Recognition features part of zFAS ECU.
- Generated test scenarios from requirements and evaluators. Decomposed logical requirements into subsystem requirements.
- Investigated serial data communications through logs and CAN traces to troubleshoot issues raised during testing.
- Created MATLAB Simulink model to implement fault insertion testing capability.
- Served as the key interface between Germany and Czech Republic test and development teams for Basic Perception and TSR functions, advocating for failure solutions, fostering effective collaboration, and ensuring successful implementation to meet business needs.

PROCTER & GAMBLE

Prague, Czech Republic

Project Engineer

08.2020 – 03.2021

- Led the coordination and implementation of OT network solutions and products on a global scale, ensuring alignment with organizational goals and standards.
- Prepared data analytics reports regarding performance and flaws about production capabilities.

FNSS DEFENSE SYSTEMS(BAE Systems Ownership)

Ankara, Turkey

Vehicle Project Quality Engineer

12.2017 – 01.2020

- Prepared & executed verification and validation activities for military vehicle electronic sub-systems integration. Which includes; ECUs, PSU, AWS, CTIS, Ride height controller, EMI/EMC, stress tests. (1 year)

- Prepared & maintained the work breakdown structure for 20.000 km durability test of a prototype vehicle. Document and report electrical, mechanical and material flaws to stakeholders including designers, customer and vendors. (1,5 year)
- Managed disposition and corrective action process of malfunction electronic components, became part of supplier quality development by using FMEA.

FNSS DEFENSE SYSTEMS

Ankara, Turkey

Intern, Part time engineer

05.2016 – 12.2017

- Achieved expertise on Unit Testing, Functional Testing(SIL, HIL) and Regression Testing on the embedded software written for ECUs which includes Engine on board diagnostics and core features.
- Gained experience in high level hardware and software debugging using oscilloscopes, logic analyzers and simulators.
- Supported MilCAN architecture conformity tests to check adherence to standards.

Education

TOBB University of Technology

BSc. in Electrical and Electronics Engineering
Final design project: Ultrasonic Anemometer

Ankara, Turkey
09.2010- 04.2017

TED Ankara College Private High School

Math-Science diploma. Granted scholarship for success in swimming(national U17 team) and lectures.

Ankara, Turkey
2010

Key Skills

SW: C/C++, MATLAB, Simulink, Python, Linux, CANape, CANoe, CANalyzer, ADTF, Trace32, LabVIEW, Corvus, Confluence, Orcas, Doors, JIRA, XRAY, Robot Controller

Certificates: ISTQB Foundation Level, High Voltage Training(JLR), Advanced Electric Vehicles Training(Warwick University)

Driving Certificates/Trainings

UK driving license, Turkish driving license, Porsche Driving Training, Class 2, Class 3, Off Road, 1PG, 3PG, MIRA, IDIADA, H driving license(tank). (Class 2,3: public road testing, 1PG, 3PG: proving ground testing)

Languages

Turkish(Native), English(Advanced), German(Intermediate)

Interests

Electric Guitar: I've been playing for 15+ years with various bands in festivals and venues.

Kite Surfing: Worked as an instructor and competed.

Swimming: Part of Turkish National Swimming team during my high school years.
